UAE **COVID-19** News
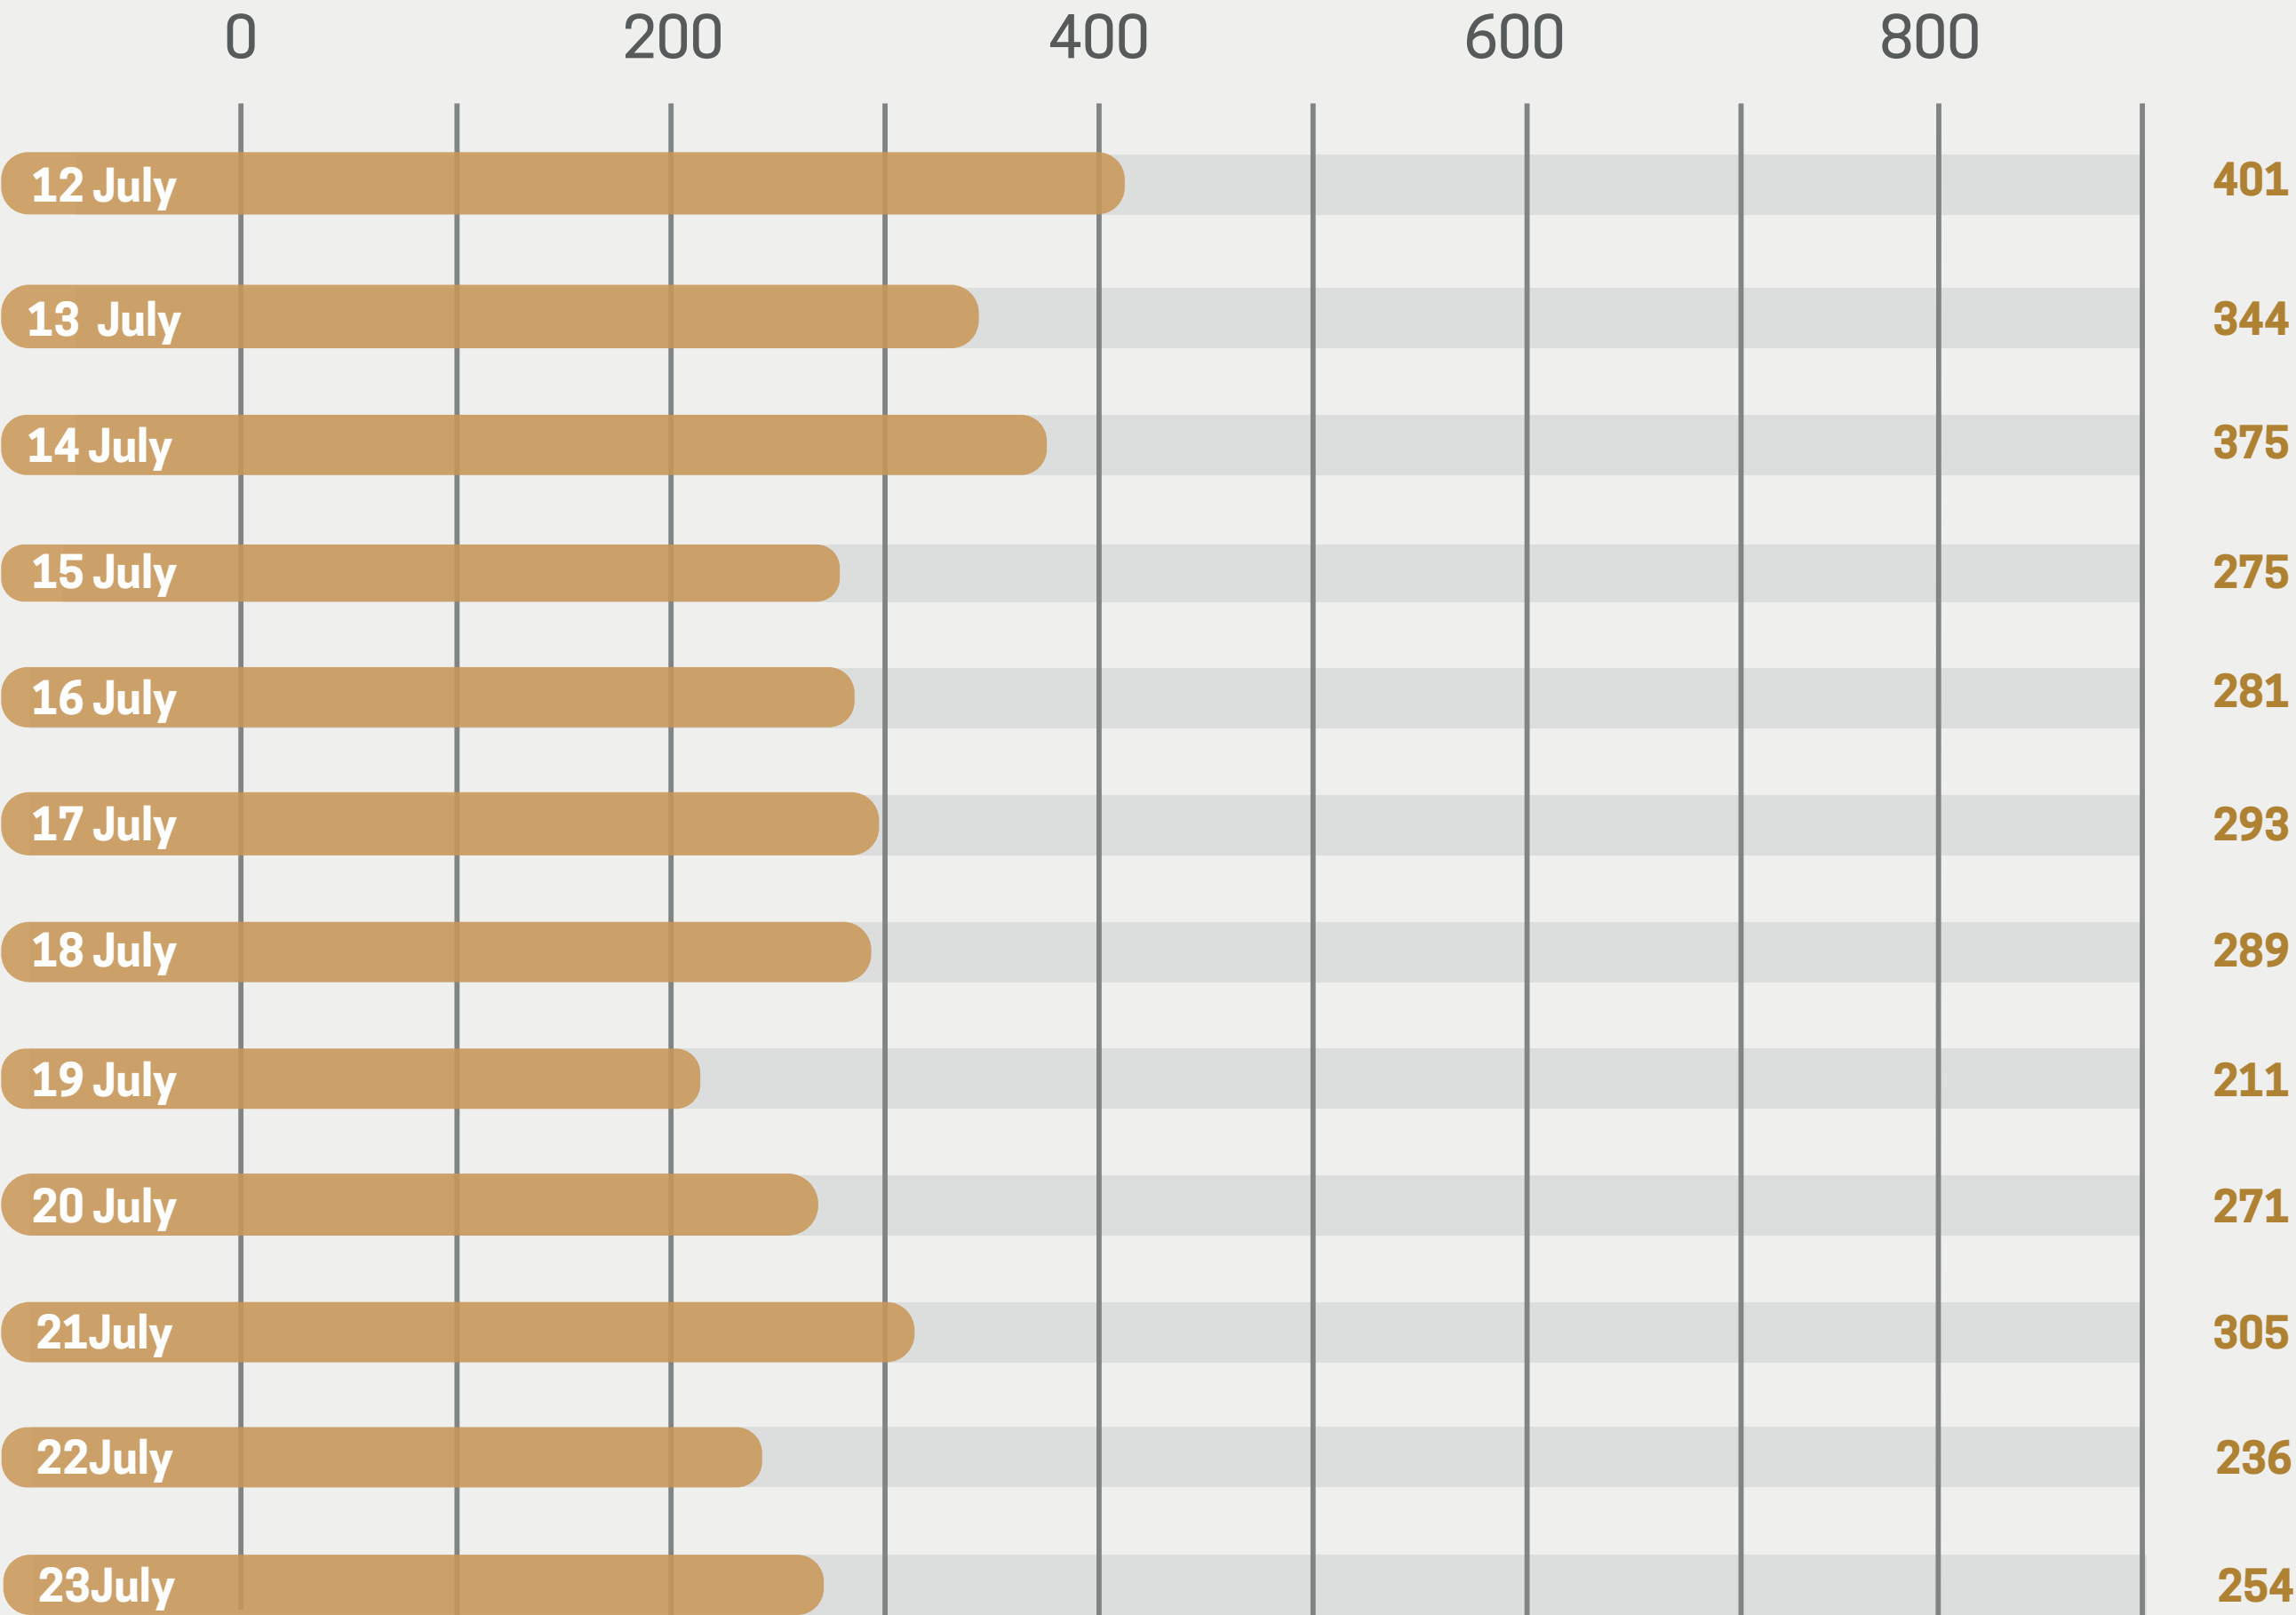

The UAE has announced that anyone travelling to the country must have a negative PCR coronavirus test before departure. This applies to all inbound and transit passengers, including citizens, residents, and tourists, regardless of the country of departure.
The rule applies from August 1.

The UAE is entering the final stage of clinical trials of a vaccine against COVID-19. Around 5000 volunteers in Abu Dhabi, including Sheikh Abdullah bin Mohammed Al Hamed, Chairman of the Department of Health Abu Dhabi, have joined the trial, which is one of only three vaccines in Phase 3 trials around the world.

A team of scientists from the UAE is investigating how the COVID-19 virus is able to transmit from animals to humans. Researchers from Khalifa University of Science and Technology hope to uncover insights into how to limit the spread of the infection.

UAE COVID-19 News

UAE airline Emirates hopes to be back to 'new normal' by October, and has released an expanded list of route and flight schedules. Meanwhile there are growing calls for tourism to take on an increased environmental focus, with ecotourism likely to grow post-pandemic.

The UAE has become the nerve centre of the global humanitarian response to COVID-19 response. It has now facilitated or delivered aid to more than 70 countries during the pandemic. Latest aid flights include Kazakhstan, Burkina Faso, Mexico, South Sudan, Namibia, and the Caribbean.

HE Abdul Rahman Al Owais

MINISTER OF HEALTH AND PREVENTION

"We hope that these clinical trials are successful. The UAE is the perfect country to undertake these trials, given that we have over 200 nationalities in the country. Safety of the volunteers remains our absolute priority."

Dr. Anwar Sallam
CHIEF MEDICAL OFFICER OF SEHA

"One of the most important tactics of handling any pandemic is testing, testing, testing. It's an investment that pays for itself. The government has made access to testing extremely easy, and all these measures have made us contain, to a very large extent, the spread of the virus."
